

The BioIQ Platform

Scalable Population Health Measurement.

BioIQ enables organizations to launch effective population health measurement programs and empowers individuals to take action to improve their health. By seamlessly connecting people to health testing through a configurable SaaS platform, BioIQ makes testing more accessible, creating more insight for people and more touch points with health service partners.

Manage Programs Centrally

Orchestrate and manage health measurement programs from a single location with the BioIQ Administrative Console.

Engage and Motivate

Configure automated outreach via email, SMS, IVR or paper mail to drive awareness and encourage participation.

Simplify Screening Events

Control traffic flow, record and upload results, and provide follow-up recommendations with BioIQ HealthSync.

Gain Meaningful Insights

Identify population health risks and trends to determine the proper follow-up action.

The BioIQ Platform

The BioIQ Platform for population health measurement includes three software tools: The BioIQ Administrative Console for configuring and managing programs, the BioIQ Participant Portal for sharing program details, results and next steps with participants, and the BioIQ HealthSync app for programs that include onsite screening events.

BioIQ Administrative Console

The BioIQ Administrative Console enables administrators to orchestrate all program aspects, whether you're administering the program yourself or using our implementation team.

- Program design
- Participant enrollment
- Test kit fulfillment
- Reminders and communications
- Reporting and analytics

BioIQ Participant Portal

Use a co-branded portal to provide participants access to test results and links to resources that address their individual health risks. Integrate with an existing member portal via inbound SSO.

- Screening scheduler
- Results displays
- Physician follow-up forms
- Education center
- Health tracking tools

BioIQ HealthSync

Streamline community screening events with BioIQ's mobile app for iOS and Android. Clinicians can use the app to access participant information and digitally capture screening results.

- Event management
- Digital consent forms
- Biometric results collection
- Automatic results upload
- Follow-up recommendations
