

Configure and manage health testing programs from a central location

The BioIQ Administrative Console significantly simplifies configuration and management of all aspects of a health testing program. Set up and customize at-home, onsite and remote screening programs, send communications and reminders to participants, and track program progress in real time.

Streamlined Program Creation

Customize programs with options for participating at home, at a lab or pharmacy location, or with an at-home test kit. Configure enrollment settings and upload participant lists to the BioIQ Administrative Console, or link to an eligibility file via SFTP. Create a branded Participant Portal with customized logos, landing pages, consent forms and FAQ sections for a seamless participant experience.

Communications Configuration

Keep your population engaged before, during and after a screening program with built-in tools for scheduling and configuring communications. Record your own IVR call messages and create participant announcement and reminder letters, or select from a list of pre-populated templates and scripts.

Onsite Event Setup

Configure BioIQ HealthSync directly from the Administrative Console to streamline onsite screening events. Customize event layout, biometric measurements and questions, and create designated stations for check-in, measurements, post-service questions and results review. Create prompts for clinicians to share information about additional wellness programs that your organization is offering.

Reporting & Analytics

Track program progress and enrollment statistics in real time, and segment data by demographic or program status to drive participation among unengaged groups. After the program, gain detailed insight into overall population health or filter results to better understand risks, so you can structure future programs that address your population's unique needs.

Elements of the BioIQ Platform

BioIQ Administrative Console

Set up and customize at-home, onsite and remote screening programs, send communications and reminders to participants, track program progress, and analyze results, all from a single location.

Program design

Communication tools

Enrollment configuration

Program progress tracking

Reporting and analytics

BioIQ Participant Portal

Create a customized portal to provide participants a seamless experience, including access to appointment scheduling, easy-to-read results, incentives tracking and resources that address individual health risks.

Appointment scheduler

Easy-to-read results

Physician follow-up forms

Education center

Health and incentives tracking

BioIQ HealthSync

Create seamless screening events with BioIQ's app for iPad and Android tablets. Configure event options in advance, creating defined workflows including check-in, screening, results review and prompts to enroll in additional wellness programs.

Immediate results upload

Consent capture

Customized content

Secure & HIPAA-compliant
